Normally, official results from the CCC would be released shortly after the contest. For this year's contest, however, we will not be releasing official results. The reason for this is the significant number of students who violated the CCC Rules. In particular, it is clear that many students submitted code that they did not write themselves, relying instead on forbidden external help.

As such, the reliability of "ranking" students would neither be equitable, fair, or accurate.

The consequences of not releasing official results will come as a disappointment to the majority of students who wrote the contest with integrity and honesty. It is disappointing that the students who violated the CCC Rules will impact those students who are deserving of recognition.

We are considering possible ways to address this problem for future contests.
